About Me

Computer Engineer oriented towards Backend development. Focused on generating meaningful changes that bring greater solidity, efficiency, and clarity to the solutions I build, helping them better address the needs they were designed for.

Experience

Feb.–Aug.
2026

Reactive Microservices with WebFlux and Kafka

Smart Financial SAS / Cali, Colombia

- Implemented reactive microservices that helped the system handle significant load peaks without compromising stability, resulting in a meaningful change in its ability to cope with demand.
- Applied non-blocking persistence to prevent I/O bottlenecks, leading to a significant improvement in the system's response capacity.
- Decoupled critical processes through asynchronous messaging, preventing background tasks from interrupting the main transactional flow and creating a significant improvement in processing fluidity.
- Contributed to API Gateway configuration and governance, strengthening access control and protection against excessive requests, resulting in a significant improvement in service management.
- Integrated real-time metrics and monitoring, enabling early detection of anomalies and contributing to a significant improvement in operational stability.
- Conducted stepped load tests to validate system behavior under demanding scenarios, identifying adjustments that led to significant improvements in its ability to handle high concurrency.
- Supported architectural documentation and performance analysis, helping inform technical decisions that led to significant improvements in project maintainability and robustness.
- Worked within a Scrum team, participating in short iterations, reviews, and Definition of Done, which enabled early detection of deviations and continuous adjustment of progress.
- Note: Kubernetes and Kong API Gateway were implemented by the DevOps team; I developed everything else directly.

Projects

2025

Audit and Compliance Software

University Project

- Designed a solution to facilitate verification of regulatory compliance, structuring assessment workflows and findings tracking to represent a significant change in the traceability of the audit process.

2024

Freelancer Web Application

University Project

- Developed a platform to connect independent professionals with potential clients, focusing its design on the consistency and security of the information, which represented a significant change in the agility to establish those connections.

2024

Online Store

University Project

- Developed an e-commerce system for a local store, structuring the catalog, cart, and order flow to contribute a significant change in the organization and management of purchase requests.

2024

Algorithm Optimization for Circuits

University Project

- Proposed and applied algorithmic optimizations for electrical circuit analysis, achieving a significant change in the efficiency of calculation processing.

2024–2025

RAG System for Document Analysis

University Project

▪ Developed a solution to process documents and generate context-aware responses from their content, organizing information retrieval in a structured way to achieve a significant change in the precision of the responses obtained.

Education

2022–2026

Computer Engineering

Universidad Autónoma de Occidente / Cali, Colombia

Training in Computer Engineering with emphasis on backend development, databases, software architecture, and agile methodologies.

2020

Academic High School Diploma

Institución Educativa Villacolombia / Cali, Colombia

Certifications

How to Solve Problems and Make Decisions Effectively

UC Irvine | May 2026

View Credential

Generative AI: Prompt Engineering Basics

IBM | May 2026

View Credential

Microservices and Reactive Applications with WebFlux and Kafka

Udemy | Feb. 2026

View Credential

Developing Interpersonal Skills

IBM | Aug. 2025

View Credential

Scrum Fundamentals Certified (SFC)

SCRUMstudy | Jul. 2025

View Credential

Technical Skills

Languages: Java, JavaScript, Python

Backend: Spring Boot, Node.js, Express.js, Spring WebFlux, Project Reactor

APIs & Messaging: REST, Event-driven architectures, RabbitMQ

Databases: MySQL, MongoDB, Firebase, R2DBC

DevOps & Observability: Docker, Kubernetes, Prometheus, Grafana, Git, CI/CD

Testing & Performance: Apache JMeter

Frontend: React, Vite.js, HTML, CSS, Tailwind

Architecture & Documentation: C4 model, API Gateway (Kong)

AI-assisted Productivity: Prompt Engineering, AI-assisted coding, validation and review of generated output

Methodologies: Agile, Scrum, Kanban (Jira)

Languages

Spanish: Native

English: B1 – Colombo Americano de Cali
