About Me

I am Alejandro Bravo Isajar, a Computer Engineer with a constant focus on deeply understanding every tool, process, and dynamic that influences my work. I stand out for maintaining a proactive attitude, learning from those around me and quickly adapting to new challenges. Within software development I have mainly oriented myself to the backend, working with technologies such as Spring Boot and Node.js, and complementing this experience with React on the frontend. I also have knowledge of relational and non-relational databases, as well as continuous integration and deployment practices, which allows me to contribute at different stages of the development cycle. I value teamwork as a space to contribute, listen, and build effective solutions, always seeking that each project leaves a solid, well-executed result with a real impact on its environment.

Experience

Feb.–Aug.
2026

Reactive Microservices with WebFlux and Kafka

Smart Financial SAS / Cali, Colombia

- Development of asynchronous microservices with Spring WebFlux and Project Reactor (Flux, Mono) under the reactive paradigm.
- Non-blocking relational persistence with R2DBC.
- Container orchestration with Kubernetes: elastic deployment, horizontal scaling, Liveness and Readiness Probes.
- Asynchronous messaging with RabbitMQ for process decoupling (background auditing, event-driven).
- Kong API Gateway configuration: transactional routing, authentication and rate limiting.
- Real-time monitoring with Prometheus and Grafana (Spring Boot Actuator, Micrometer).
- Massive performance testing with Apache JMeter: stepped load injection and high-concurrency simulation.
- Architectural documentation with C4 model (context, containers, components).
- JVM performance diagnostics: heap analysis, garbage collector in reactive flows and memory leak detection.
- Note: Kubernetes and Kong API Gateway were implemented by the DevOps team; I developed everything else directly.

Projects

2025

Audit and Compliance Software

University Project

- Tool for companies to validate their compliance with international standards (ISO, ITIL, among others).
- Assessment modules, report generation, and findings tracking.

2024

Freelancer Web Application

University Project

- Design and development of a platform to connect independent professionals with potential clients.
- REST API with Spring Boot, MySQL database.
- Authentication and user management.

2024

Online Store

University Project

- Implementation of an e-commerce system for a local store.
- Product catalog, shopping cart, and order processing.

2024	Algorithm Optimization for Circuits University Project
	▪ Improvement in the design and analysis of electrical circuits. ▪ Algorithm optimization to increase efficiency in calculations.

Education

2022–2026	Computer Engineering Universidad Autónoma de Occidente / Cali, Colombia Training in Computer Engineering with emphasis on backend development, databases, software architecture, and agile methodologies.
2020	Academic High School Diploma Institución Educativa Villacolombia / Cali, Colombia

Certifications

How to Solve Problems and Make Decisions Effectively UC Irvine May 2026	View Credential
Generative AI: Prompt Engineering Basics IBM May 2026	View Credential
Microservices and Reactive Applications with WebFlux and Kafka Udemy Feb. 2026	View Credential
Developing Interpersonal Skills IBM Aug. 2025	View Credential
Scrum Fundamentals Certified (SFC) SCRUMstudy Jul. 2025	View Credential

Technical Skills

Languages: Java, JavaScript, Python
Backend Development: Node.js, Spring Boot, Express.js, RESTful APIs
Frontend Development: HTML, CSS, React (Vite.js), Tailwind
Databases: MySQL, MongoDB, Firebase
DevOps & Tools: Docker, Git
Methodologies: Scrum, Agile
Other: Algorithm optimization, Software architecture, Software documentation

Languages

Spanish: Native
English: B1 – Colombo Americano de Cali
